

CHAPTER V

CONCLUSION AND SUGGESTIONS

Based on the explanation of findings that presented in the previous chapter, in this chapter presented the conclusion and suggestions.

A. Conclusion

Based on the explanation of findings in the previous chapter, the researcher concluded that:

There were obviously some main points related to the finding covered the students' grammar mastery especially on past tense by using bingo game. There is significant effect of the students' grammar mastery after they taught by using bingo game. Based on the data analyzed by using *Paired Sample T-Test* on SPSS 16.0 for windows, the researcher found that the students' mean score before they taught by using bingo game was 56.86. While, the students' mean score after they taught by using bingo game was 80.00.

The finding of this research indicated that the null hypothesis (H_0) was rejected, and the alternative hypothesis (H_a) was accepted. It can be concluded that there was any significant difference in the grammar score of the students before and after they taught by using bingo game. This research revealed that teaching grammar by using bingo game was effective to improve the students' grammar mastery.

B. Suggestions

Hopefully if the future researcher wants to conduct the next research that still related to the effectiveness of bingo game and students' grammar mastery can be better, more clear and more detail. It means that the future researcher should not focus on one skill and the scope of subject as the sample can be larger than this research. Because in this research, the researcher limit the number students as the sample. The researcher just use one class that consist of 35 students as the sample. In addition, the next research can find out the latest theory to make the research strong. So, the research can show the different result and can be perfect than previous research.
